New School Board Holds First Meeting

Will Hold Monthly Meetings on First Monday

The first meeting of the newly elected School Board was held last Monday evening with a full attendance.

Mr. H. G. Sheasby was re-elected chairman of the Board for the current year.

The usual accounts were approved for payment.

It was decided to hold the Board meetings on the first Monday of each month and that a notice be posted in the Post Office for five days prior to each meeting so that rate-payers who had any matters to bring before the Board would have ample notice as to when and where they might interview the Board.

In order to give the Board an opportunity to study school expenditures the striking of the estimates for the year was left over till Friday evening when a special meeting will be held.

A resolution was unanimously passed instructing the secretary to write a letter to Mr. King congratulating him on the success of the High School Dramatic Competition recently held and conveying to him the appreciation of the Board for the splendid training he is giving the pupils along the lines of Dramatic Art and also requesting Mr. King to extend the congratulations of the Board to the winning cast and also to the individual winners of the Competition, Jim Brown, Jim Lowens and Elsie Blades.

The meeting then adjourned.

Mrs. A. J. Nicolson and Mr. W. Moran of Calgary motored to town on Saturday to spend the weekend with Mrs. Moran who is ill at the home of her parents Mr. and Mrs. P. Lavelle.

The C.G.I.T. Group of St. Ambrose Church held a whist and tea in the Parish Hall on Tuesday afternoon. Mrs. J. Lope won first prize, for victor and Mrs. Wheeler the consolation. The first prize for bridge was won by Mrs. Leppard.

Local Legion Holds Monthly Meeting

Was Addressed by Member of Imperial Section

At the regular monthly meeting of the local Legion held last Sunday afternoon Mr. Dal Morgan, representative of the Imperial Veterans section of the Canadian Legion, addressed the gathering.

He gave a most interesting talk on the aims and objects of his branch of the Legion and the many problems facing the Legion in the future.

President H. J. Cox gave a detailed account of the provincial convention held in Calgary and outlined a number of the resolutions to be brought before the Dominion Convention to be held in Ottawa.

The financial statement for the month showed the Club's standing to be in a very satisfactory condition.

The meeting was well attended several visiting comrades from Medicine Hat being present.

Katharine Hepburn In "Little Women"

Now Showing at New Dreamland Regular Prices

The suddenness and decisiveness of Katharine Hepburn's decision to star in "Little Women" has amazed the world. But it could not be as a matter of luck, but rather as a brilliant culmination of long, arduous work and stubborn clinging to an ideal, through both her stage career and her screen experience. Thrice this star, currently appearing in the most enviable cinema role of the current season that of Jo in "Little Women," deliberately cast her chances to the four winds rather than sully her ideals.

Once Katharine Hepburn agreed herself out of the leading role in the presentation of "The Big Pond," because the stage director wouldn't allow her to play it according to her own ideas, and again she showed the same stubbornness just before the opening curtain of "Death Takes a Holiday." Both plays were big hits.

"It was not stardom so much as faith in myself," explains Miss Hepburn. I believed that if I could only see myself I would succeed, but I followed the dictates of others and became, hence, a sort of automaton, comporting myself 11 ways I lacking in the vital spark." She attributes her success in "Little Women" to the perfect artistic understanding and harmony which existed between herself and Director George Cukor.

Miss Helen Taylor, of Medicine Hat, was the guest of Mrs. W. J. Fairbairn on Wednesday last.

Tickets are going quickly for the Medicine Hat Little Theatre Three-Act play which is being put on in the Empire Theatre on Saturday afternoon and evening of this week. Redcliff people are advised to make their reservations at Pingle's Drug Store as soon as possible.

LOOK AT YOUR LABEL

School Dramatic Contest And Little Theatre Play Great Success Last Friday

Students Make Splendid Showing Portraying Characters in Their Literature Selections—Little Theatre Cast Greatly Pleased Audience—School Prizes Awarded

One of the most enjoyable entertainments given here for some time, was put on in the Little Theatre last Friday evening, when the high school and the Little Theatre group joined forces for a full night's program. The dramatic competition in connection with the High School Literary Society, which consisted of five one-act sketches from the prescribed literature in the several classes, formed the first part of the program. So well was each of these put on and so ably did each take his part that it would be futile for us to attempt to single out a group or make special mention of the ability of any of the twenty-five or thirty students who took part. Nor were there any present who evoked the judge's task of making the decision for the prize winners.

The first selection was the "Courtship of Miles Standish," the students of Class I Literature. This depicted a simple Puritan love scene in which little Doris Wyatt showed rare talent as Precilla and she was ably supported by other members of the cast.

"The Rainbow Inn" was the setting for the meeting of five old cronies who discussed the gossip of the district over their corn cobs and flowing bowls. The characters were taken by five girls and one boy from Literature 2 class, who kept the audience amused from start to finish.

Literature 3 class put on "Mr. Bumble's Proposal." This was a splendid opportunity for Frances Jacobson and Richard Lepp to show considerable talent in depicting Dickens' idea of these characters taken from Oliver Twist. Both showed up to advantage in the climax to Bumble's awkward though irresistible love making.

The fourth play was a scene from "Les Misérables" by Victor Hugo, and was put on by French 2 class. In this Jean Valjean, recently released from prison while seeking asylum, visits the residence of a Bishop who feeds him and gives him a bed for the night, he steals the Bishop's silverware and escapes only to be brought before the Bishop again by the police. In the scene which follows Jean is forgiven and the holy father completely reforms the poor outcast. This calls for some very clever acting which was splendidly done by Jim Brown as the Bishop and Jim Lowens as Jean Valjean.

The last entry in the competition was by French 3 class which presented a dramatic scene from Prosper Mérimée's novel, "Columbo." This Act was based upon a Corsican family feud, in which Orso della Rebbia is attacked by two brothers concerned in the feud. He kills both of them but his life blood flows away he is discovered in a bandit's shack by his sister and his sweetheart. The scene was very touching and the characters were nicely portrayed by Jean Peterson as Columbo, Ruth Fow as Lydia Nevil, and Reggie Ross as Lieut. Orso della Rebbia, while Robt. Buchan added greatly to the amusement by his admiration of Orso's marksmanship and Chinila's late arrival to arrest Orso. Lillian Lenning took the part of Chinila in a very military manner.

The decision of the judges appeared to be quite popular when it was announced that "Jean Valjean" was the winning play and Jim Brown the winner of the first individual prize. The second prize was divided between Jim Lowens and Elsie Blades. The latter was one of the leading characters in "Rainbow Inn."

The evening's program was concluded with the one-act play: "The Maker of Dreams" put on by the Little Theatre Group. The cast was made up of Emma Frey as Pierrette, Malcolm Stewart as Pierrot and Bernard Thacker as the Maker of Dreams. The play is a dainty fantasy in which the Maker of Dreams finally convinces Pierrot that while he is gazing at the stars for guidance and his ideal, he is actually passing up a real dream at his very door. The production was that the cast was most admirably chosen. All portrayed their parts in a most capable manner although each was of a distinctly different type.

The theatre was well filled for the occasion and all were delighted with the program.

Mr. King is deserving of great praise for the interest he has taken in this branch of school work and for the splendid training he is giving the students.

The World's Day of prayer will be observed here on Friday afternoon at 3 p.m. in the Parish Hall.

The Valentine Tea held in Gordon Memorial School room on Wednesday afternoon, although poorly attended, provided enjoyment for those who were there. The jigaw contest was won by Mrs. E. T. Cooke and Miss Margaret Moore. Mrs. C. T. Hall was the winner of the Flower Contest and Mrs. Jones the consolation.

On behalf of the Ladies' Aid presented a souvenir open to Mrs. H. Chamberlain in recognition of her long and valuable services in the work of the A.I.D. Mrs. J. Stratton, the president, also spoke in eulogistic terms of the work of Mrs. Champ who is leaving shortly for the old country. Dainty refreshments were served by members of the A.I.D.

Redcliff Reminiscences
Taken From Our File of February 19 1915

These are the days to patronize the merchant who advertises in the newspapers. The merchant who advertises is doing his part in keeping things going that is the man who should be encouraged. Calgary, Alberta

The first oil well for this district will be drilled a short distance from the Brick and Coal plant. The machinery is now being placed in position for operation.

The century of peace between Great Britain and United States was celebrated in all the churches here last Sunday.

The School Board authorized the purchase of two new school sites, one in Arlinton, the other in Phoenix, at the meeting this week.

Colin F. McLean of the Canadian Highlanders has written a letter of appreciation to the S.O. E. for their gift of cigarettes received by him in France.

Former Redcliff Boy Married at Portland

McElvogue—Sheldon

We reprint the following from a Portland paper, giving an account of the wedding of a former Redcliff boy, Tom McElvogue. Many will remember Tom as an outstanding boy singer during his school days here.

A pretty wedding was solemnized at Woodstock Methodist Episcopal church. Woodstock boulevard and Forty-fourth avenue last Wednesday night, when Miss Elizabeth Victoria Sheldon, daughter of Lemuel C. Sheldon, became the bride of Thomas Robinson McElvogue, son of Mr. and Mrs. Joseph McElvogue, the Rev. T. Watford Reed officiating.

The bride, who was given in marriage by her brother, Harold H. Sheldon, wore a dress of white satin, made with floor-length skirt, deep yoke of rose point lace and long full sleeves. Her full length veil was caught about her head in a simple cap of the same material. She carried a shimmering bouquet of bridal roses and sweet peas.

Miss Evelyn Turner, who was the bride's only attendant, wore a frock of Nile green taffeta, with contrasting turban of pastel yellow, and carried a floral muff, with showers of sweet peas and roses.

Donald C. Marshall acted as best man for the bridegroom. A reception followed at the home of the bride's brother and sister in law, Mr. and Mrs. Harold H. Sheldon.

The Valentine Tea held in Gordon Memorial School room on Wednesday afternoon, although poorly attended, provided enjoyment for those who were there. The jigaw contest was won by Mrs. E. T. Cooke and Miss Margaret Moore. Mrs. C. T. Hall was the winner of the Flower Contest and Mrs. Jones the consolation.

On behalf of the Ladies' Aid presented a souvenir open to Mrs. H. Chamberlain in recognition of her long and valuable services in the work of the A.I.D. Mrs. J. Stratton, the president, also spoke in eulogistic terms of the work of Mrs. Champ who is leaving shortly for the old country. Dainty refreshments were served by members of the A.I.D.

JUST FOR FUN

Criticized for addressing his employer as Mr. Arrison, an East and Londoner remarked: "Well, a hutch and a hay two hares, a hit and a hes, a ho and a hen, don't spell Arrison, I don't know what does."

When a girl's face is her fortune it usually runs into an attractive figure.

"I don't like his stuff," said a certain theatrical man not partial to David Balasco, "and I'll find a reason yet."

A politician is a man who stands for what he thinks other people will follow.

He's not the kind who stays quiet when his friends are being criticized. Oh no! He joins right in.

Wheat Over-Supply Is Serious Reality

So Says the Head of the Co-operative Pool

Expressing faith in the capability of western Canada's agriculture to expand greatly, in the long run, John I. McFarland, general manager of the Canadian co-operative wheat pools, issued a statement covering the world wheat situation.

Nevertheless Mr. McFarland said there is no sense in being deterred about the present situation. Those who have indicated there was really no surplus wheat were scored by the pool head, who declared over-supply was a serious reality.

"The source of origin of all propaganda against wheat acreage reduction should and must be carefully examined before it is accepted inasmuch as the value of all criticism depends upon whether it is free from self-interest or entirely altruistic," Mr. McFarland's statement said.

"On analysis it will be found most of what such writers state is in the form of unsubstantiated opinion or conjecture and general hypotheses which express their own imaginations."

"In the long run, I still believe western Canada's principal industry is soundly based and capable of great expansion but figures show that for the next year at least we must help other nations to eat the wheat market in order, and in the meantime we must not delude ourselves about the pressing nature of the problem confronting us."

Best Grains For Feeding Beef Cattle

(Experimental Farm Notes)

In the feeding and management of beef cattle, particularly in times of low beef prices, one of the main objectives is to make the maximum use of inexpensive home-grown feeds and pastures.

Canadian grown barley, oats, wheat and corn are excellent feeds for beef cattle. Barley is probably the most important of these grains. It is widely grown in Canada and is an excellent fattening feed and produces beef of a high quality with fat of a nice white colour. In feeding trials conducted both in Canada and in United States, barley has been shown to be practically the equal of corn in the beef ration.

Oats have a tendency to produce growth rather than to fatten beef rapidly. This is due to the fact that they are higher in fibre, bulkier, and richer in protein than barley or corn. A combination of oats and barley is ideal for young cattle or for steers just starting on grain feed. At first the percentage of the two can be about equal but as the steers approach a finish the proportion of barley should be raised.

Mr. L. E. Johnson, formerly of the Bowell district but recently of Medicine Hat, has purchased the house on Broadway previously owned by Mrs. Kerr. Mr. and Mrs. Johnson intend moving into it shortly to reside.

Read the ad over carefully. It will make your shopping easy.

Vancouver Shipping Has Shown Amazing Growth

Figures Rising Far Above Level Of Five Years Ago

A routing measure of cheer and confidence is issued by the Vancouver harbor commissioners.

Shipping figures are rising far above the level of a year ago and a wider range of export totals of new port growth.

"The people of Vancouver and the whole of British Columbia can take heart from the accomplishments of the past 12 months," said Sam McKay, president of the commissioners. "Each one of us is concerned with the shipping of Vancouver as a port. During the past year not only has it increased in total tonnage, it has shown new and greater life in practically every commodity handled."

Mr. McKay pointed out that the increase embraced virtually all the basic industries of the country, and he said a healthier condition in Canadian business generally.

Logs and lumber, and manufactured shingles, doors and pulp and paper show big gains over 1932.

Concentrates, almost completely absent during the past three years, reappeared in a sizable movement.

Other material gains were in flour, scrap metals, salt fish, apples and salmon.

The latter, with a 60 per cent increase over 1932, is a good augury for the future.

A new shipping movement by United Kingdom boats, in that of bananas and citrus fruits. Coming from Central America and California, they imports created a considerable amount of intercoastal trade, far above that of 1932.

Similarly significant was the larger number of small fishing craft using the harbor commissioners' facilities. A larger number of passengers passing through the port continued the active increase in port business.

"More and more, the products of the countries of the world pass over the docks of Vancouver, and the port can be said to be a virtual clearing-house of world goods," said Mr. McKay.

With preparations under way for a busy term, the privetting spirit at the harbor commissioners' office is "Watch 1934!"

Not Hard To Learn

Six Dots Give The Key To Braille

For The Blind

Six dots, arranged like the six dots of a domino, give the blind a key which opens out for them the whole range of literature and music. By cutting out one or more of these dots, sixty-three different combinations can be formed, and the inter-combinations possible are innumerable. This is the famous Braille system, called Braille after its inventor, and it is used by blind readers who are in every part of the world. The sixty-three combinations allow sufficient variety to cover any ordinary alphabet and also the punctuation marks and contractions. They can also be applied to numerals and music symbols. A thorough knowledge of the Braille system can be acquired by a few weeks' study, and proficiency in reading—performed by the fingers—is obtainable after about six months.

Speeding Up Business

More Cheques Cashed In Banks, Official Information Reveals

Speeding up of business during 1933 as compared with the preceding year is indicated by the comparative totals of cheques cashed by branches of chartered banks in Canada. A return issued by the Department of statistics shows an increase of \$1,317,000,000 or 16 per cent, in favor of 1933.

The total amount of cheques cashed at chartered banks in 32 centres of Canada during 1933 was \$29,981,000,000. The comparable amount during 1932 was \$28,664,000,000.

Debits in the prairie provinces were 33.7 per cent greater than in the preceding year. The total in 1933 was \$6,414,000,000 and the corresponding increase amounted to \$1,017,000,000.

Westminster Abbey

Westminster Abbey will acquire additional status in the eyes of the empire in the course of a few weeks when a bust of Adrian Lindsay Gordon, the national poet of Australia, will be placed in poster corner, next to that of Tennyson. The monument is being erected at the expense of the Commonwealth government.

W. N. U. 1933

JAPAN SEES FLIGHT OF U.S. NAVAL PLANES AS NEW THREAT

Almost as soon as the six United States Navy airplanes completed the 2,100-mile flight over the Pacific to Hawaii, news came from Tokyo that the Japanese war lords were viewing the result with alarm as pointing to a new war threat.

They don't like the idea that airplanes can fly across the ocean in mass formation for 2,100 miles. Our figure shows the start of the long hop (lower right), from Paradise Cove, San Francisco. At top, one of the planes in the air, while in Lieutenant Commander McGinnis, who commanded the squadron on the night to Hawaii.

The Danish Hog Card

The picture above is a reproduction of a Danish "hog-card." This card is said to be the most valuable thing in Denmark.

When the United Kingdom announced the first restriction on imports of bacon from other than Empire countries, Denmark was forced to take steps to insure that the amount of bacon shipped should not exceed the quantity agreed upon with Britain. It became evident that two things had to be done, (1) to arrive at a fair basis of division between producers, of the hogs that could be used in filling their British quota, and those which could not be used, and (2) as rapidly as possible to reduce production to a basis which would permit of the disposal of the total product.

The hog-card system was adopted to accomplish both purposes. By its use each producer of hogs was carefully worked out system. The number of hogs each farmer could put into the British quota was determined. As Denmark is a very small compact country, this could be done.

To every farmer is given a card for each hog which he may desire in the quota scheme. These are divided into monthly periods.

To dispose of the remainder farmers may also deliver hogs without being accompanied by a card. All such hogs are sold at a price determined by what can be secured for the product. A couple of months ago it was said the value was about half that of the "quota hogs."

It is easy to see how under present circumstances the bit of card on board represented above may well be a thing of extraordinary value in Denmark.

Oldest Court Of Justice

The oldest court of justice in the world is the "Tribunal of the Waters" held weekly in Valencia, Spain, for 972 years. Eight judges hear cases concerning the vast water system of the province and quickly render their verbal decisions, which are not subject to argument or appeal.

In accordance with his dying wish the ashes of a wheelwright were scattered over the floor of the forge where he had worked for 40 years in South London, and the wheelwrights were burnt in the furnace.

Two 18,000-ton liners to be built in Italy for Poland are to be hauled for Polish coal for the Italian State Railways.

History Of Ancient Church

Book Gives Insight Into Life Of English Parish

The Hampshire Advertiser and Southampton Times contains an interesting account of early history of the ancient church of Lynton parish in England. An insight into the life of the early times and the human side of the church's history is contained in a book by the Rev. Charles Beckett and Edward Hagood.

Reference is made in the "Notes" to a William Pitt, who was parish priest for forty years in the early part of the last century. He used to occupy the lowest portion of an ancient "three-decker" pulpit, and being very deaf, he often said "Amen" at the wrong time. The sexton, whose regular duty is said to have been to ring steadily about the church around with a stout cane to thrash the boys, was, at critical periods of the service, seen standing in the aisle opposite the deaf clerk to signal him when to say "Amen."

"The church is thought to have been built about 1250, although it is thought probable that there was a parish church in the town centuries before that."

Making Public Air-Minded

Great Future For Aviation Coming With Low Priced Planes

"The nations are fascinated all at once by the great future they feel can come to aviation through inexpensive aeroplanes. With the United States estimating that 50,000 planes, if costing no more than \$700, can be absorbed immediately, Britain needs up development work on a new low-priced engine. This motor cost only for \$195, and a suitable fuselage could be had for \$380. Cost of wings and gear would be added. Low cost and low speed might bring what flying has long needed—a public as ready to take to the air as it was ready to take to the road—Christian Science Monitor.

Carloadings of the National Railway of Mexico are greater than a year ago.

Matter Of Education

Nations Can Avoid War By Learning To Trust Each Other

The unlikelihood of immediate war and the necessity of educating nations and individuals as to its futility as a means of settling national problems were ideas developed by Prof. George M. Wrong in the course of an address on "Foreign Relations" at a meeting of the Women's League of Nations Association in Toronto.

"I don't believe war is at all imminent in Europe; I don't believe there are forces in Europe adequate to war. In fact, there seems to be no prospect of war unless some great emergency rises," was Professor Wrong's reassuring conclusion, after having discussed the European situation at length and having set forth the foreign relationships of various countries.

"The cynic will tell you we have always had wars and will always have them; that we cannot change human nature," he said. "We cannot change human nature, but we can educate it out of the idea that war is the solution of national problems." He said, "The only logical solution is good-fellowship, the willingness of nations to trust one another. Avoid the cynic—avoid the man who says that because things have been done through ignorance and stupidity in the past, we cannot shape a better world," he advised.

Not Natural Instinct

Many people think that birds of the breed known as carrier pigeons were bred for the purpose of carrying messages but as matter of fact, the homing instinct was but little developed in this breed. With the flying homer pigeon, however, it is a natural instinct which by careful training can be developed to a wonderful degree.

Nearly forty whales, which were washed ashore on the British coast, have been offered to the British Museum in the past year, the institution having first choice of all such stranded.

Improving Cereal Varieties

Good Qualities Could Be Combined In One Wheat

No reason exists why all the good qualities of any wheat cannot be combined in one wheat. Dr. J. H. Harrington, professor of field husbandry, told members of the Saskatchewan Field Husbandry association at their convention at the University of Saskatchewan, in an address on the improvement of cereal varieties. R. H. Potter, manager of the International Harvester Company at Saskatoon, spoke on "Our Mutual Interests," and T. Twiney-Smith led a discussion on the variety testing work of the association. At the banquet in the evening R. N. Argue, past president of the Saskatchewan board of trade, and Harry Cook, editor of the Saskatchewan Farmer, were the principal speakers.

Dividing the field of cereal improvement in the sections of introduction of varieties from other lands, selection of the best strains within variety, production of new varieties by hybridization and inbreeding, Dr. Harrington described some recent acquisitions, illustrating his lecture by charts.

Life membership in the association was conferred on James Bridge, who coached the junior grain judging team which won first place at the World's Grain Show in Regina; Roy Blake, Haden Van Vleet and Everett Whewell, members of the University team; Herbert Potter, Saskatchewan Thomas, Years, Marquis, and Frank Isaacson, editors.

British Trains Public Men

Has Admirable System Of Giving Them Every Chance

A name figuring much in the cables recently is that of Captain Anthony Eden, on New Year's Day promoted to be British Lord Privy Seal. Despatches carried Captain Eden's name then as well as his references to the King.

Anthony Eden is not yet 36 years old. But he has been in parliament eleven years. In 1929 he was one of the British delegates to the Empire Press Conference in Australia, and Canadians who travelled with him then say in him a young man, modest and unassuming but intensely studious and sincere. He was not a journalist, but he became attached to Lord Bournemouth's Daily Telegraph so that he might visit Australia, get to know more of the Empire. It was a part of his training.

Anthony Eden's career is a side-light upon the British conception of politics. It is a conception that regards politics not only as an honorable career, but as a highly technical science, as a calling demanding an apprenticeship. In Canada a young man of Anthony Eden's temperament and talents would have small chance of getting a constituency. In England he is singled out, watched over, trained; given the apprenticeship that goes to a career diplomat. It is an admirable system—Ottawa Journal.

Moved To New Locations

Nearly 2,000 Families Taken From Drought Areas In Alberta

A total of 3,063 families have been moved from drought areas in various parts of Alberta under the free freight policy as operated during the past three years under agreement between the provincial and federal governments and the railways. Approximately 4,500 individuals were represented in this movement.

In 1931, when the system went into effect, 423 families were moved; 183 in 1932, and 538 in the 1933 season just closed. In terms of freight the three years' moving totalled 1,986 carloads of stock, equipment, and household effects.

Filled His Place

A Scotman holding an important job in the city was always being twitted by an English friend about his nationality. By a curious chance the two met on holiday.

"Hallo," greeted the Englishman, "how on earth is your office managing to get on without you?" "Fairly well," answered the Scot, cautiously. "You see, I left two Englishmen and four Welshmen in my place."

Forgot One Thing

The nature of taxicab driving breeds a crop of men unusually well fitted for war service, according to an army officer. Car drivers are tough and alert, the military expert points out, and, besides, they are, enough, to mention that they are particularly good on the charge.

Difficulty Overcome

Bridge Flexibility Of Wings Is Feature Of New Aeroplanes

The dream aeroplanes of every pioneer of flying since Leonardo da Vinci—a machine which can reproduce, in their utmost delicacy, all the motions of a bird—is awaiting at Parborough Aerodrome, a day in the near future when it will make its first demonstration flight before an audience of experts from all countries, states a wire from the World.

The secret of this wonderful new development in man's conquest of the air lies not in range of engine power, nor in any new aerodynamic principle, such as the rotor or windmill plane, but in the bridge flexibility of the wings themselves.

The idea of a flexible wing—or to be more technical, the variable camber wing—is not new, but the difficulties of putting it into practice have hitherto proved insurmountable. To vary the camber of an aeroplane's wing while in flight means to alter the direction of the air flow over the wing surface, resulting in an increase or diminution of the lifting power and retarding forces.

The effect of such manipulation of the shape and curve of the wing, to give the aircraft a wide range of speed—the ability to climb rapidly and descend slowly without the attendant disadvantages of slow speed when proceeding in normal and level flight.

Birds have the power of adapting the shape and curve of their wings for rapid or slow flight, and this has enabled some of their movements that have eluded Signor Ugo Anton, the inventor, to be duplicated and to be regarded as a practical impossibility.

He experimented with aeroplane wings. To vary the surface of resistance to the air-flow of his wings—varying the camber—would achieve its purpose, and give the aircraft a higher range of speed and safety than the aircraft of today could afford.

Such a would have to be done by a mechanism of some sort—but a mechanism that would have to be installed inside the wing itself, he said, and it was to be expected that the mechanism of the wing, and sufficiently strong to pass the rigid stress-tests imposed by the authorities. The mechanism would also have to be controlled by a lever in the pilot's cockpit.

New Signor Anton claims that he has solved this mechanism. He has, he says, triumphed in his lifelong quest of the real bird aeroplane, and he has gained the serious interest of the leading aeronautical experts of the world.

England's Politest City

Commercial Travellers Give Sheffield The First Place

Is Sheffield the politest city in England? Commercial travellers say it is. It is the first place the commercial traveller must make the railway stations by an indicator which, on his pressing a button, will direct him by means of electric lights to the spot which he wants to be and where to get the nearest tramcar. If he is still in doubt, he has but to ask the first person he sees and, by or she, will not only tell him where to go but will actually walk with him round the corner. This attitude is borne out in all the city's social contacts with strangers.

For Important Post

The resignation of Albert Einstein, indicated by an economist at Harvard university, to accept an appointment with the Canadian government in connection with the proposed establishment of a central bank in the Dominion was announced at the university. Einstein will be a tax investigator doing research for the deputy minister of finance in the promotion of the proposed central bank, it was said.

New Planets Discovered

The Bourque Observatory, Algiers, Africa, announced the discovery of two planets situated in the Asteroid swarm between Mars and Jupiter. The scientists reported the new planets were first sighted in November, and since then have been confirmed by photographs made in observatories all over the world. The planets temporarily are design as "19,123 WB and OR."

Smith: "It is not the cost of the car that worries the average motorist, but the cost of the strings." Jones: "And sometimes the 'tires' over."

FANCFUL FABLES

WORLD HAPPENINGS
BRIEFLY TOLD

The tendency to glorify war in the school text books was denounced by Dr. Tereuse W. L. McBurney, secretary of the League of Nations Society, Toronto.

"Sunshine Inn", free dining room in Victoria, B.C., celebrated its second birthday on January 4 with a record of 200,000 meals served to the needy.

The "Life of Our Lord", which Charles Dickens wrote for his children, may be published after all. An offer of \$50,000 was reported to have been made for the book.

Claimed to be the fastest war vessel afloat, a new type of torpedo craft, capable of a speed of 55 knots, is under trial at Saint-Nazaire, France.

British Columbia beef cattle growers have gone on strike as favoring a national marketing board. It has been announced by J. A. Grant, provincial commissioner.

Churchill's first public "stopping place" will be erected at the northern support next spring. Harry Chesney, northern pioneer and hotelman, announced he received a permit from the Manitoba government for the Churchill structure.

Described as one of the most valuable historic relics discovered in the northwest, a metal bell found by Capt. James Cook, Pacific northwest and Antipodes explorer, when he landed at Noctua, Vancouver Island, 1778, has been found.

Completion by the government of Canada of a special chamber at the port of London for use in the handling of Canadian chilled and frozen meat products was announced by Hon. H. H. Stevens, minister of trade and commerce.

British Columbia's agricultural products, despite depressed prices, were worth \$34,666,000 in 1933, a slight gain over the 1932 figure of \$34,375,923, according to a year-end estimate, released by Hon. K. C. MacDonnell, minister of agriculture.

Lewis Lukes, pioneer Canadian railroad builder, is dead at Toronto at the age of 80 years. He was associated with Mackenzie and Mann in construction of the Canadian Pacific railway through the Rockies and in completing the Canadian Northern railway.

The success of the League of Nations depended on the development in each country of strong movements that would support the ideal of international co-operation. Hon. Ernest Lapointe, president of the League of Nations Society in Canada, said in an address at Ottawa.

Too Hard On Roadbed

Speedy Trains Are Not Put Into Regular Service

A train which took so quickly that its high speed is still in advance of practical use is an anomaly, but Germany possesses it today in the electrical "Flyer" Hamburg, and it is of interest to note that thirty years ago speeds unequalled in the world were achieved by electrical trains built by English electric companies. On September 15, 1903, a speed of 124.58 miles an hour was reached, and this was increased on October 27 to 130.66 miles. Technical difficulties, especially connected with the roadbed, were responsible for the fact that these trains were not put into regular service. There was also no popular demand at that time for such rapid travel. The record of 124.58 miles an hour, "Zeppelin on rails" two years ago still stands unchallenged as the world's record for travel on rails, but the speed is too high for practical use.

Starts Fitting Reading

Mrs. Helle Gilman, 58, of Fort Scott, Kas., has begun her 50th reading of the Bible and the plan is to finish next Christmas Eve. Just as she has done for 43 consecutive years. "For good measure she has learned in six other complete readings by following her weekly Sunday School lesson. Mrs. Gilman completed her 40th reading at the home of a daughter in Springfield, Missouri, on Christmas Eve.

In Canada there are some 150 species of different varieties of trees. Only 33 of these are conifers, commonly known as softwoods, but they comprise 80 per cent. of standing timber.

T. N. O. 2031

Alberta Phone System

Government Would Sell Lines To Farmers' Organizations

Running behind at the rate of a million dollars a year on its telephone system, the Alberta government is negotiating with a large number of farmers' organizations in an effort to sell its rural lines. One side has been completed, a group of farmers west of Hinton taking over the lines and telephones in that area.

The rural lines may be purchased at sacrifice prices. Poles in the districts, including anchors, cross-arms, side block, insulator and other accessories are offered at 50 cents apiece. Iron wire will be sold at a cent a pound, or about \$3.40 for a mile of line (two wires).

Could Prevent War

Blumenfeld States Britain And United States Have Plans

Ralph D. Blumenfeld, chairman and editor of the London Express, says with some force that talk of war in Europe is "hush" and that Britain and United States, "standing shoulder to shoulder," could prevent any war from starting.

It is true. If the British Empire and the United States who held the bag and pulled the bills in the late summer war in Europe were to refuse to come into another one, physically or financially, no nation in Europe would fight—Vancouver Sun.

LOVE-LORN OFFICE BOY (a student of the movies): "Mine is no light attraction, Miss Taylor. Believe me, baby, I've fallen for you in a big way."

International Trade

Nations Have Always Exchanged Goods That Were Similar

While we are waiting for Britain to become self-sufficient in optical instruments and Iceland in salt pork, it turns out that France, the land of spicers and wine, finds it necessary to import her spices and pears from the United States. So perhaps the nations may yet continue to find things which they can probably not change among themselves, not only fruit for cotton or silk for copper, but actually fruit for fruit and rice kind of silk for another kind of silk. At least men have been exchanging such things since the dawn of history—New York Times.

Textile glove makers in Germany are rejoicing over an increased demand from America for cotton fabric gloves.

A man is old only when he begins to accept things as they are without trying to better them.

Moisture Conservation

Hon. James F. Bryant, K.C., chairman of the Saskatchewan Commission on Conservation and Afforestation, has announced particulars of a statement which he felt—

- (1) would result in the desired curtailing of water wastage;
- (2) would reduce the moisture and prevent the drying out of the land by hot winds;
- (3) would help to keep the roads open in winter;
- (4) would furnish a wood supply for every farm;
- (5) would help to shelter birds which would assist in keeping down the insect pests;
- (6) would add to the beauty and attractiveness of the landscape;
- (7) would help very materially to bring back normal rainfall to the drought stricken areas of the province.

This could be accomplished by the planting of trees in strips ten rods wide running East and West, and North and South through every farm section of land in the prairie districts of Saskatchewan.

If all the trees now growing on the Forestry Farms at Indian Head and Humboldt, and on the Provincial Institutional Farms at Battleford, Prince Albert, Regina, Moosehead and Weyburn, were made available for this purpose and an additional very large acreage put in next spring for this drive, through the co-operation of the Federal and Provincial Governments, a very large start could be made in the proposal during the first season.

The prospects are that there will be plenty of moisture in the next few years so that the trees would get a good start and grow rapidly, and it is essential that the leaves of the dry years be not forgotten, and provision made to insure the next years.

This plan has recently been suggested by an expert in the United States and fits in exactly with the Saskatchewan proposal to remedy conditions in the drought area in the years that are to come.

It is a common saying that the best way to keep a thing is to let it go. This is true in many cases, but in the case of a drought-stricken area, it is essential that the trees be planted and allowed to grow, so that they can provide shade and moisture for the crops and livestock.

The trees will also help to reduce the wind, which is a major cause of the drought. By planting trees in strips, the wind will be broken up, and the crops will be protected from the drying effect of the wind.

The trees will also help to improve the soil. By planting trees in strips, the soil will be protected from the drying effect of the wind, and the moisture will be conserved in the soil.

The trees will also help to improve the water supply. By planting trees in strips, the water will be conserved in the soil, and the crops will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the livestock. By planting trees in strips, the livestock will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the livestock will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the crops. By planting trees in strips, the crops will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the crops will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the people. By planting trees in strips, the people will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the people will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the world. By planting trees in strips, the world will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the world will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the future. By planting trees in strips, the future will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the future will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the universe. By planting trees in strips, the universe will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the universe will be able to draw on the water supply during the drought.

Ancient Irrigation System

One In Yucatan Superior To Any Built By Egyptians

Excavated hundreds of years ago by Mayan engineers of the ancient Yucatan, a storage and irrigation system in the Yucatan area is to be restored and put back into service by the Mexican Government. The intricate network of underground canals, said to be superior to that of the ancient Egyptians. Reservoirs of the system were lined by the Mayan engineers with waterproofed stone and plaster, as were the aqueducts, branch canals and drainage channels. Thus enough water was stored during the rainy season for use during the rest of the year.

Tree studies in Colorado's Rocky Mountain region indicate that there has been little change in climate for the past 400 years.

Mexico's population is 16,552,722, the Department of Commerce announces.

That are immediately to follow to any returning periods of drought, with all available scientific knowledge.

The Government could make a contract with each farmer in the dried out area, to summerfallow a strip ten rods wide, each year, through the centre of the section of land, and cultivate the trees for ten years after they are planted, and at the same time keep the stock out of the young trees. In consideration of this agreement, the Government could furnish the trees and set them out the year following the summerfallow of the land. The strip could consist of half quick-growing trees and half ash, elm and the trees planted alternately.

In the event the farmer or tenant failed to cultivate the trees, the Municipal Council could have the work done and charge up the taxes against the land.

Where the farmers' boundaries are in the centre of the section, each farmer could take care of the five rods of timber on his own land. The proposed plan will utilize ten acres on each quarter section. This acreage taken from cultivation is intended to comply with the terms of the Wheat agreement could not be employed to greater advantage.

The move will drift into the timber and be in the centre of the section and away from the roads, so that they could be kept open during the winter at minimum cost.

The move banks in timber will not by degrees in the spring after the frost gets out of the surface of the ground so that the water will not run away on the frozen surface but will sink into the ground and help build up the reserve of moisture in the subsoil.

This plan has recently been suggested by an expert in the United States and fits in exactly with the Saskatchewan proposal to remedy conditions in the drought area in the years that are to come.

It is a common saying that the best way to keep a thing is to let it go. This is true in many cases, but in the case of a drought-stricken area, it is essential that the trees be planted and allowed to grow, so that they can provide shade and moisture for the crops and livestock.

The trees will also help to reduce the wind, which is a major cause of the drought. By planting trees in strips, the wind will be broken up, and the crops will be protected from the drying effect of the wind.

The trees will also help to improve the soil. By planting trees in strips, the soil will be protected from the drying effect of the wind, and the moisture will be conserved in the soil.

The trees will also help to improve the water supply. By planting trees in strips, the water will be conserved in the soil, and the crops will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the livestock. By planting trees in strips, the livestock will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the livestock will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the crops. By planting trees in strips, the crops will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the crops will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the people. By planting trees in strips, the people will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the people will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the world. By planting trees in strips, the world will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the world will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the future. By planting trees in strips, the future will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the future will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the universe. By planting trees in strips, the universe will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the universe will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the future. By planting trees in strips, the future will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the future will be able to draw on the water supply during the drought.

The trees will also help to improve the health of the universe. By planting trees in strips, the universe will be protected from the drying effect of the wind, and the water will be conserved in the soil, so that the universe will be able to draw on the water supply during the drought.

An Aviation Beacon Light

Saskatoon To Have Largest One Between Toronto And Vancouver

Establishment in Saskatoon of an aviation beacon light, that will be visible for distances of more than 75 miles to flying men approaching the city, is being undertaken by the Quaker Oats Company. Prominent citizens have expressed their appreciation at the installation of this facility as much needed for night flying. The beacon will be located between Toronto and Vancouver. It will consist of a revolving lens of white light with a 900 watt lamp having a ray capable of discernment in distances ranging from 75 to 100 miles according to atmospheric conditions; a red stationary lamp of 1,000 watts with its ray directed to the landing field; and a smaller red light directed vertically upward to indicate to aviators danger of landing at the beacon. The beacon will be installed on top of the highest tower of the plant, already used as a daylight landmark by Saskatoon flyers. The beacon will be visible in clear weather at a distance of 60 miles.

Making Poultry Pay

Ten Eggs Per Hundred Hens Daily Means Profit

It takes twenty-five pounds of feed for a hundred hens daily, and at present feed prices the income from ten eggs will pay for the feed. Flocks producing more than ten eggs per hundred hens daily will produce a profit. If flocks are properly fed on a good ration and are kept under sanitary conditions, they will produce net income. This is available at the present time from the new branches of the farming industry, states H. H. Alp, University of Illinois poultryman.

New York's Latest Idea

City To Have Reproduction Of Solar System In Miniature

The New York Evening Post says: "Heaven has been a long time coming to New York. In fact, it isn't here yet."

But it's scheduled for the spring of next year.

It's an "artificial heaven," reproduction of the solar system in miniature. And it's to be placed in the planetarium building to be constructed by the Museum of Natural History on the Eighty-first street side of its grounds on Central Park West.

Crowning the two-story structure will be a dome having a diameter of seventy-five feet. At the base of the dome the horizon will represent the skyline of New York in silhouette.

Before the eyes of the onlookers will be unfolded the mighty panorama of the skies.

"The inverted bowl," in the words of Dr. George H. Sharwood, director of the museum, "becomes a stage where the tremendous drama of the heavens, with an 'all-star cast,' is presented within the shortest span of an hour."

New York's to be made possible partly by a bond issue of \$600,000 to be purchased by the Reconstruction Finance Corporation and partly by a gift of \$150,000 from Charles Hayden. The RFC money pays for the building and Mr. Hayden's gift provides the canopy of stars. Hence the announcement that the name of the structure is to be "The Hayden Planetarium."

Star-gazing will be a thrilling experience in New York's artificial heavens.

Weighing A Ship

Gross Register And Displacement Have To Be Figured

The tonnage of a vessel is of two kinds. First there is the gross register. This means the cubic capacity of the ship's hull added to that of all erections on deck, but excluding space occupied by machinery. This is calculated in units in 100 cubic feet of the Board of Trade ton.

Secondly there is displacement which gives the vessel's actual weight. The part of the ship under water is measured and the weight of water that would occupy its place is calculated.

have you heard that I was to be one of the family?"

Bobby: "Sure, long ago, haven't you?"

Stella's Place—Well, Bobby, a Scotch woman claims to have invented the war tank because she saw many of them in a vision.

Debit Is Too Heavy

Public Bodies And Corporations Of Canada Carrying Big Load

The following article is from the MacMillan Report: Between 1900 and 1914 the total indebtedness of the public bodies and corporations of Canada rose to over two billions of dollars. It is not sufficiently realized that the reason for this was the war, because in 1914, New is it true that the war was largely responsible for this. By 1919 the total had risen from 2 to 2.5 billions only. Moreover the actual increase in the burden of debt since 1919 is much greater, because of the fall in prices, than expansion from 2.4 to 2.5 billions of dollars would indicate.

Were this debt held wholly in Canada it would still bear heavily enough on the producer. But the fact that much of the money came from abroad has involved the country in an external debt problem of great magnitude as well. It is clear that all the elements of the Canadian economy must be highly efficient and its natural wealth be abundant, if the debt is to be borne and the population is to continue to enjoy the high standard of living characteristic of North America.

People Still Inventing

Exhibits At Minnesota Show Are Unique As Usual

Inventors are inventing things, no matter what the morrow brings—things ranging from rubber shoes to hair tonic. They are on display at the Minnesota Inventors' Show in Minneapolis, where D. C. Jones proudly claims that his device will make the grass grow green by just sprinkling it on the lawn. For laymen who want the extra mile sleep in the morning, there is a pair of rubber shoe laces that never have to be tied or untied. Just slip your feet in the shoes and presto—no tying. A Negro has claimed to have a substance that will take the kink out of hair. A white gentileman exhibited a device to put the back. One can take one's choice.

Recipes For This Week

(By Betty Barclay)

OATMEAL, BUT COOKIES

1 1/2 cups sifted cake flour
1 1/2 teaspoons double-action baking powder
1/2 teaspoon salt
2 teaspoons cinnamon
1 teaspoon cloves
1 teaspoon ginger
1 cup butter or other shortening
1 cup brown sugar, firmly packed
1 egg, well beaten
1/2 cup nut meats, chopped
1/2 cups raisins
1/2 cups oatmeal
1/2 cup milk
Sift flour once, measure, add baking powder, salt, and spices, and cream the butter. Cream the sugar, add egg, nut, and raisins; then oatmeal and flour, alternately with milk. Mix well. Drop from teaspoon onto greased baking sheet and bake in moderate oven (350 degrees F.) 25 to 30 minutes. Makes four dozen cookies.

FRUIT CARAMELS

1 cup eggs
1 cup seeded raisins
1 tablespoon candied orange peel
1 cup sifted dates
1/2 cup walnut meats
2 to 4 tablespoons orange juice
Steam fruit for twenty minutes. Cool and put through food chopper with walnuts. Moisten with orange juice until of firm consistency to make into small balls or squares.

Price Of Bibles

Great crosses rock daily to the British Museum to see the famous Codex Bezae Cantabrigiae, bought at a cost of \$500,000 from the Russian government but felt noticed as a little nearby, which is priced at only \$150. The huge family Bible belongs to William Gladstone, founder of the early 19th century of the first British settlement in remote Victoria in Canada.

City Under Paris

Under Paris lies the greatest museum-producing centre in the world. It is a colossal subterranean city, with a perfect ventilating system and eight miles of illuminated passages, lined with marvellous Bibles and other treasures of the first British settlement in remote Victoria in Canada.

The S.O.E. held a most en-
joyable social evening on Friday
evening in the local Cliff Hall. Mrs.
F. Cann and Erwin Schmidt won
the honors at cards, and Mrs.
Hicks and Harold Lenning took
the consolations. An innovation
by way of a Carpet Ball contest
was introduced and Mrs. Tanner
won highest score. After a
dainty lunch dancing was the or-
der of the evening, the music be-
ing provided by Mr. George
Thomson and Mr. Hosie. There
was a splendid attendance, many
coming from Medicine Hat,
and a very enjoyable evening
was spent.

Mrs. Fairbairn was a week-end
visitor in Medicine Hat, the
guest of Mrs. Taylor.

Harvest Vale school opens on
Wednesday next with Miss Fran-
cis Buchholz as teacher.

Mr. O'Neill, of Wallaceburg,
Ontario, has arrived in town to
superintend the installing of a
new machine for making lamp
chimneys at the Glass Plant.

Considerable improvement is be-
ing made on Broadway this week
Ditches on either side of the
street are being filled in so as to
give better drainage.

As Mrs. Congram has with-
drawn as secretary of the Little
Women in connection with the
St. Ambrose church, Mrs. H.
Johnson has been appointed to
the position.
